Growing Cotton

Cotton

165-180 Days

This is the same cotton used to make your t-shirts and jeans.

Some varieties have naturally colored fibers instead of white.

Grow some of your own cotton and amaze your friends.

Pull fiber off seeds and plant indoors in a 4" pot by April 1st.

Transplant outdoors around May 12-15.

Bolls ripen and burst open in late fall. Plants grow 5-6' tall and may need staking.

Planting:

Plant 5/5-5/15

(Guidelines for planting in raised beds)

Seeds: Pull individual seeds out of cotton bolls. Cotton bolls have 10-20 seeds per boll.

Sow seeds in rows spaced 8-12" apart and thin plants to stand 12-15" apart in each rows, which allows the plant room to grow.

Care:

Seeds: Water regularly with a gentle spray. Keep the soil moist, so that the seeds will germinate.

Young seedlings: Water when top 1 inch of soil dries out. Mulch the plants with cotton burr compost to keep soil moist.

Harvest:

Cotton begins as a blossom that looks similar to a rose.

After the blossom opens, the petals will turn yellow and fall off the plant.

A hard, green boll will be left. Slowly, the boll will open and the cotton will be revealed.

Harvest the cotton by pinching the stem above the fiber.

Multiple yields will grow on the cotton plant.
