

Free Workshops

Did you know? KCCG offers 40+ free gardening and cooking workshops each year. With topics ranging from an introduction to vegetable gardening to tips and tricks for pest management and cooking demonstrations with fresh garden produce, we welcome everyone from beginner gardeners to seasoned pros.

See the schedule and register at:
kccg.org/workshops

Online Resources

KCCG's website offers guide sheets on a wealth of gardening topics, including watering, fertilizing, pest management and more!

Find them at
kccg.org/gardening-guidesheets

Our vast library of online videos can help you with most anything including planting, maintenance, harvesting, and cooking.

Find them at

Growing Garlic

KCCG
KANSAS CITY COMMUNITY GARDENS

KCCG's Varieties

Chesnok Red Hard Neck -

1 lb = 6-7 bulbs and will make approximately 90-100 plants.

Chesnok Red is a cold-hardy, purple-striped hardneck variety known for its fine flavor and smooth texture when roasted. Produces large bulbs with 8-12 medium-sized cloves per head. Stores 6 months when cured. A stiffneck or hardneck type. The plants produce a fibrous stalk that send up an edible flower scape in the spring.

German Hard Neck - 1 lb = 6-7 bulbs and will make approximately 36-42 plants. A porcelain hardneck variety with a full, distinctive, spicy flavor that will stand out in any dish. Plump cloves are perfect for roasting and store well. These cold-hardy plants produce a fibrous stalk that send up an edible flower scape in the spring.

Music Hard Neck - 1 LB = 6-7 bulbs and will make approximately 36-42 plants. A cold-hardy, spicy and incredibly flavorful garlic. Easy-to-peel cloves with white and purple striped outer skin and pink-tinged clove skins. Fewer, but larger, cloves per bulb than the German Hardneck. The plants produce a fibrous stalk that send up an edible flower scape in the spring.

Planting:

Plant in mid-November through mid-December while the temps are still cold, but the ground has not yet frozen solid.

- Prior to planting, break up the garlic bulb to separate the cloves, but do not peel the cloves.
- Garlic cloves should be planted 4-6" apart.
- Dig a hole 2-3" deep and then stick one clove in the hole, with the root side down (pointy side up).
- Fill the hole with soil and you're good to go!
- After a hard freeze, mulch the garlic with 4" of straw.

Care:

Garlic has a long growing season, so remember that whatever garden real estate you use, it will be tied up through early summer.

Additionally, do not plant garlic in an area that you will need to till in the spring; raised beds work very well for growing garlic.

Care Continued:

Your garlic should sprout sometime in April, when temperatures start to warm. When you see the garlic sprout, give it a boost with some fertilizer.

Water your garlic regularly and fertilize every two weeks.

In late spring, hardneck garlic plants will produce a round stem with a seed pod on the end. Cut these seed scapes off as soon as you see them, as they put the plant's resources into making seeds instead of making a big garlic bulb.

Harvest and Storage:

Garlic is typically harvested in mid-June when the leaves start to brown. Stop watering garlic two weeks before you plan to harvest so that the soil is loose and plants pull up easily.

Allow garlic to dry in a cool, dark place. You can cut off stalks of hard neck when fully dried about an inch above the bulb and store in a dark, dry location (about 60-70 degrees). Avoid storing garlic in the refrigerator as it will not keep as long. If stored properly, garlic can last 4-6 months.
